

Mustafa Ozan Karsavuran

Computer Systems Engineer 2, Lawrence Berkeley National Laboratory, Berkeley, California, 94720 USA

✉ ozan.karsavuran@gmail.com | ✉ MOKarsavuran@lbl.gov | 📠 ozan-karsavuran-421a7419

SUMMARY

Experienced researcher specializing in high-performance computing, parallel algorithms, and sparse matrix/tensor computations. Skilled in MPI and OpenMP programming, GPU acceleration, and hypergraph partitioning models. Proven experience in performance optimization, algorithm development, and successful collaboration on large-scale scientific computing projects.

EDUCATION

Bilkent University, Department of Computer Engineering, Turkey

- **Doctor of Philosophy** GPA: 3.47/4.00 September 2014 – August 2020
Thesis: Reducing Communication Overhead in Sparse Matrix and Tensor Computations
Advisor: Prof. Dr. Cevdet Aykanat
- **Master of Science** GPA: 3.60/4.00 September 2012 – September 2014
Thesis: Increasing Data Reuse in Parallel SpMV and SpMTV Multiply on Shared-Memory Architectures
Advisor: Prof. Dr. Cevdet Aykanat
- **Bachelor of Science** GPA: 3.44/4.00 September 2007 – June 2012

RESEARCH EXPERIENCE

Computer Systems Engineer 2

Lawrence Berkeley National Laboratory

November 2025 – *present*

Berkeley, California, USA

★ Sparse Symmetric Matrix Factorization

Postdoctoral Scholar

Lawrence Berkeley National Laboratory

November 2022 – November 2025

Berkeley, California, USA

★ Sparse Symmetric Matrix Factorization

- Right-looking sparse $A = LDL^T$ factorization 2023
 - ◇ Developed efficient pivoting strategies for factoring sparse general symmetric matrices
 - ◇ Achieved higher accuracy and reduced fill-in
- Right-looking sparse Cholesky factorization 2023
 - ◇ Accelerated a serial Cholesky algorithm on GPUs, achieving $4\times$ speedup; results published in SC24-W
 - ◇ Developed a serial right-looking supernodal sparse Cholesky factorization
 - ◇ Obtained a Cholesky algorithm that requires no temporary working storage and avoids assembly operations

Postdoctoral Researcher

Bilkent University

September 2020 – October 2022

Ankara, Turkey

★ Stochastic Gradient Descent (SGD) for Matrix Completion

- Scaling stratified SGD for distributed matrix completion 2022
 - ◇ Collaborated on a point-to-point (P2P) communication scheme and a related hold-and-combine algorithm
 - ◇ Implemented a computational load balancing method and an HP model that minimizes the communication volume
 - ◇ Obtained up to $15\times$ faster parallel runtime and published the results in IEEE TKDE
- Reducing stale data usage and bandwidth requirements in SGD 2022
 - ◇ Contributed to the design of the MPI-based SGD with sub-iterations
 - ◇ Designed and implemented an HP model that minimizes both staleness and bandwidth requirements in SGD
 - ◇ Obtained up to 34% reduction in parallel runtime and published the results in IEEE TC
- Hybrid Parallel SGD 2022
 - ◇ Contributed to the design and implementation of the MPI + POSIX-threads-based hybrid parallel SGD
 - ◇ Obtained up to $6\times$ better throughput and published the results in KNOSYS

★ Parallel Sparse Tensor Decomposition

- Hiding latency of sparse point-to-point (P2P) communications within dense all-reduce operations 2021
 - ◊ Collaborated on reorganizing the CPD algorithm for embedding P2P messages into ALLREDUCE messages
 - ◊ Designed and implemented an HP model that minimizes the concurrent communication volume in the embedded ALLREDUCE
 - ◊ Scaled CPD on up to 4096 processors and published the results in IEEE TPDS
- General medium-grain sparse tensor partitioning for distributed a CPD 2019
 - ◊ Designed and implemented an HP model for medium-grain partitioning without any topological constraint
 - ◊ Utilized the RB paradigm to boost performance at each level of the partitioning
 - ◊ Conducted experiments with 10 real-world tensors on 1024 cores and published the results in IEEE TPDS
- Locality-aware fiber and slice reordering for shared-memory MTTKRP 2017
 - ◊ Implemented an HP model for reordering fibers and/or slices of tensors to increase cache locality during MTTKRP
 - ◊ Adopted SPLATT's OpenMP-based MTTKRP and conducted experiments

★ Large Scale Benchmarking

- Code owner of the NEMO package in the PRACE-6IP T7.4.A activity 2021
 - ◊ Prepared architecture specific build files for both NEMO and XIOS packages for six tier-0 HPC systems
 - ◊ Benchmarked the NEMO and XIOS on HAWK, TGCC Joliot Curie, JUWELS, Marconi100, MareNostrum, and SuperMUC-NG using up to 10,000 cores
 - ◊ Contributed to the deliverable PRACE-6IP-D7.4: Evaluation of Benchmark Performance

★ Other Hypergraph Partitioning Models

- Simultaneous computational and data load balancing of the processors on distributed-memory setting 2022
 - ◊ Collaborated on the design of two-constraint HP models that encode computational and data load simultaneously
 - ◊ Collaborated on experiments with two different applications and published the results in SIAM J. Sci. Comput.

Teaching and Research Assistant

Bilkent University

September 2012 – June 2020

Ankara, Turkey

★ Sparse Matrix Vector Multiplication (SpMV) and Sparse Matrix Dense Matrix Multiplication (SpMM)

- Volume balancing and latency minimization for reduce operations 2018
 - ◊ Formulated a novel vertex weighting scheme for the HP model that balances volume loads across processors
 - ◊ Implemented a refinement algorithm invoked during recursive bisection (RB) and decreased the increase in communication volume
 - ◊ Performed extensive experiments on 512 processors for 70 matrices
 - ◊ Obtained a 30% faster parallel runtime in column-parallel SpMV and published in IEEE TPDS
- Locality-aware shared-memory parallel $y \leftarrow AA^T x$ on many-core processors 2014
 - ◊ Implemented OpenMP-based $y \leftarrow AA^T x$ which achieves reuse of A-matrix nonzeros and vector entries
 - ◊ Conducted detailed experiments on Intel Xeon Phi co-processor running in offload mode
 - ◊ Obtained a 20% reduction in parallel runtime and published in IEEE TPDS

★ Generalized Sparse Matrix Matrix Multiplication (SpGEMM)

- Efficient Vectorization of SpGEMM 2016
 - ◊ Transformed a $C = ADB$ instance into $C = Zd$ SpMV instance by multiplying A-matrix with B-matrix columns
 - ◊ Implemented an efficiently vectorized OpenMP-based $C = Zd$ using AVX instructions
 - ◊ Conducted experiments on the Intel Xeon Phi co-processor and Xeon processor

TECHNICAL SKILLS

Advanced in: C, C++, MPI, OpenMP, MATLAB, MAGMA

Familiar with: CUDA, Fortran, Python, Java SE, C#, Assembly (MIPS and Intel 8051), PHP, SQL

PAPERS UNDER PREPARATION

TALKS & POSTERS

- Sparse Cholesky Factorization Utilizing GPUs, SIAM CSE25, TX, USA.
- Heuristics for Robust Factorization of Sparse Symmetric Indefinite Matrices, SIAM LA24, Paris, France.
- Sparse Tensor Partitioning for Scalable Distributed CPD-ALS, SIAM PP22, Virtual.
- Medium-Grain Partitioning for Sparse Tensor Decomposition, SIAM CSE21, Virtual.
- Exploiting Matrix Reuse and Data Locality in Sparse Matrix-Vector and Matrix-Transpose-Vector Multiplication on Many-Core Architectures, SIAM CSC16, NM, USA.

PROFESSIONAL SERVICE

- **Reviewer** for IEEE Transactions on Parallel and Distributed Systems
 - **Reviewer** for ACM Transactions on Architecture and Code Optimization
 - **Reviewer** for The Journal of Supercomputing
 - **Reviewer** for CCPE (Concurrency and Computation: Practice and Experience)
 - **Reviewer** for PPAM22 (14th International Conference on Parallel Processing and Applied Mathematics)
 - **Reviewer** for BAŞARIM 2020 (6th National Conference on High Performance Computing)
 - **Reviewer** for IPDPS 2018 (31st IEEE International Parallel & Distributed Processing Symposium)
-
